

Leveraging the Echo of the Global Stocktake

Online Seminar

29 January 2024, 1600-1730 CET (3pm to 4:30pm GMT)

This online seminar will discuss how to leverage the outputs of the Global Stocktake (GST) for more ambitious climate action. The discussion will be based on a policy paper on this topic and shall inform further work on this paper, also taking into consideration the outputs of the GST in the context of the Nationally Determined Contributions (NDC) policy process.

The first Global Stocktake under the Paris Agreement was concluded at COP28 in December 2023. The goal of the GST is to inform the upcoming policy process to develop new or enhanced nationally determined contributions (NDCs). The policy paper that will be presented discusses various forms of communication on how to transfer the knowledge compiled in the GST outputs into ambitious climate action.

Time	Agenda Item
16:00 – 16:05 CET	Welcome and Introductions, Frederik Pischke, German Environment Agency
16:05 – 16:15 CET	Presentation Main outcomes of the Global Stocktake, Wolfgang Obergassel, Wuppertal Institut
16:15 – 16:25 CET	Presentation Policy Paper <i>"How can the echo of the Global Stocktake be leveraged for enhanced climate action"</i> , Lukas Hermwille, Wuppertal Institut
16:25 – 16:55 CET	 Comments by Discussants Mariana Gutiérrez Grados, Iniciativa Climática de México, A.C Manjana Milkoreit, University of Oslo Brian Mantlana, Council for Scientific and Industrial Research (CSIR)
16:55 – 17:15 CET	Open Discussion
17:15 – 17:30 CET	Wrap-Up
